Description			
<p>I'm using awesome with focus=1/unfocus=0.7 config, and sloppy focus.</p> <p>I opened 2 xfce4-term windows, w1 and w2. When i switch focus to w2, opacity changes as expected. When i switch back focus to w1, w2 disappears. I a switch focus to where w2 was, w2 appears and w1 disappears.</p> <p>If i open a third window w3, and switch focus from w2 to w3, w1 is properly unfocused and w2 disappears. Then is a switch to w1 again, w3 disappears and w2 stays hidden.</p> <p>Using xcompmgr these test cases work as expected.</p> <p>Notice i get plenty of such warnings after the first switch, dunno if it's related:</p> <pre>WARN: event_handle_error:185: X error: request=RenderFreePicture (major=149, minor=7, resource=1e00003), error=Picture WARN: event_handle_error:185: X error: request=RenderComposite (major=149, minor=8, resource=1e00002f), error=Picture</pre>

Thanks for the bug report.

#2 - 01/07/2012 08:40 PM - Marc Dequènes

Still reproducible. Same effect with xterm.

Fortunately it is somehow fixed in master (2bc0784bf48d83b00095ea9d676924b0ab24b7b2).
