

Unagi Compositing Manager - Bug #29

Can i Haz my menus?

01/31/2012 05:13 PM - Marc Dequènes

Description

Coin,

When searching specific entries in my firefox menus, submenus in the "Tools" entry did not always open. After opening/closing many times menu entries, they randomly began not to work, until all my menus were unusable. I can reproduce using Emacs or ClawsMail. Clicking on an invisible menu entry triggers the proper action, so i guess it is a mere repaint problem.

All these were GTK apps, but it is reproducible with QT4 (tested with qtdemo).

Stopping Unagi restores the universe as it should be.

Associated revisions

Revision 8267ade2 - 02/02/2012 04:08 AM - Arnaud Fontaine

Reset window Damage when damaged and unmapped before being painted (closes #29).

Otherwise, with DamageReportDeltaRectangles level, a window or part of it (especially noticeable with menus) may never be repainted again.

Tested-by: Marc Dequènes <duck@duckcorp.org>
